

# Goulds 3316

Two Stage, Horizontally Split Case Pump

# 3316

Two Stage, Horizontally Split Case Pumps designed for boiler feed, mine dewatering and other applications requiring moderately high heads with a wide range of service conditions

- Capacities to 681 m<sup>3</sup>/h (3,000 GPM)
- Heads to 305 m (1,000 feet)
- Temperatures to 177°C (350°F)
- Pressures to 3,792 kPa (550 PSIG)

## Design Features

### Casing

Removal of upper half permits inspection, maintenance or removal of rotating element without disturbing piping or pump-to-motor alignment

### Impellers

Hydraulically balanced – opposed for axial balance. Opposed cut-waters provide radial balance.

### Wear Rings

Easily replaced, protect against casing wear.

### Maximum Interchangeability

Reduces inventory requirements.

### Duplex Thrust Bearing

Provides high thrust capability.

### Materials of Construction

Available in all iron or bronze fitted. Most sizes available in steel and stainless steel.

## Services

- Boiler Feed
- Mine De-Watering
- Booster
- High Pressure Process
- Condensate
- High Pressure Cleaning

## Performance Curve

## Specifications

### Shaft

Short span keeps deflection to a minimum. Radius fillets are rolled into the shoulders at threaded portions to increase shaft fatigue strength. Radius fillets also machined into keyways to distribute stress more evenly along the shaft.

### Shaft Sleeve

Threaded against impeller hub, and free to expand or contract with temperature changes. One sleeve tightens against rotation, and is further secured by a set screw. Other sleeve is key driven. This unique locking design of sleeves permits field change of rotation without additional parts. An O-ring seal positively prevents leakage between shaft and sleeve.

### Casing Diaphragm

Forms dividing wall between stages and is renewable to maintain pump performance.

### Construction

Regularly available in bronze fitted or all iron. Most sizes available in steel and stainless steel. Other materials available upon request.

### Maximum Interchangeability

Reduces inventory requirements.

### Stuffing Box

Standard packed box has 5 rings of die-formed packing and a split lantern ring. Standard gland has tapped openings for quench or cooling liquid and a ring of packing to prevent liquid from spraying or traveling along shaft outside gland.

Unbalanced, balanced or double mechanical seals are available.

### Bearings

Thrust bearing is a duplex angular contact ball bearing. It carries radial load and any residual unbalanced thrust. The coupling end deep groove radial ball bearing is pressed on the shaft and is free to float axially carrying radial load only. Flood oil lubrication is standard.

### Rotation

Standard right hand construction. Left hand rotation available, rotation may be changed in field.

# 3316

## Two Stages / Horizontally Split Case Pumps Heavy Duty Design Features for Wide Range of Services

### RENEWABLE CASE WEAR RINGS

Permit easy maintenance of proper running clearances – protect against casing wear. Double lock in lower half casing to prevent rotation.

### UPPER HALF CASING

Permits inspection, maintenance or removal of complete rotating element without disturbing piping or alignment.

### OIL LUBRICATION STANDARD

Oil level maintained by constant level oiler. Sealed against contamination.

### SHAFT SEALING FLEXIBILITY

Packed stuffing box or variety of mechanical seals available. Conversion of one to the other can be accomplished in the field without machining. Equalizing piping keeps boxes at essentially suction pressure.

### STUFFING BOX BUSHING

Limits stuffing box pressure. Protects casing from wear. Easily replaceable. Secured with double lock in lower half casing.

#### HIGH THRUST CAPABILITY

With duplex thrust bearing and shaft lock nut. Provides long, trouble-free operation under the wide service conditions to which these pumps are exposed.

#### HEAVY DUTY SHAFT

Designed for toughest services. Renewable shaft sleeves fully protect shaft from pumpage.

#### HYDRAULICALLY BALANCED IMPELLERS

Axial thrust of one impeller is counter-balanced by axial thrust of other impeller. Opposed cut-waters balance radial load reaction. Load on bearings is low.

#### MAXIMUM PARTS INTERCHANGEABILITY

Not only within the line but with Goulds Model 3405 single stage pumps. Keeps spare parts inventory to a minimum.

#### OPTIONAL IMPELLER WEAR RINGS

Can be mounted on impeller without additional machining of impeller. Locked on impeller hub with stainless steel set screws.

# Parts List and Materials of Construction

Item Number	Part Name	Material			
		Bronze-Fitted	All Iron	All Bronze	All 316SS
100	Casing (Upper & Lower)	Cast Iron	Cast Iron	Bronze	316SS
101	Impeller-Suction, 1st Stage	Bronze	Cast Iron	Bronze	316SS
102A	Equalizing Tubing	Copper	Steel	Copper	316SS
103 <sup>1</sup>	Casing Wear Ring	Bronze	Cast Iron	Bronze	Nitronic 60
104	Shaft Sleeve-Locking	316SS	420SS <sup>2</sup>	316SS	
107	Stuffing Box Split Gland	316SS			
112A	Ball Bearing-Thrust	Steel			
122	Shaft	SAE 4340		316SS	
123	Deflector	Glass-Impregnated Nylon			
125	Stuffing Box Bushing	Bronze	Cast Iron	Bronze	316SS
126	Shaft Sleeve	316SS	420SS	316SS	
136	Bearing Locknut	Steel			
142	Impeller Wear Ring (Not Illustrated)	Bronze	Cast Iron	Bronze	316SS
145	Impeller-Discharge, 2nd Stage	Bronze	Cast Iron	Bronze	316SS
146	Diaphragm	Bronze	Cast Iron	Bronze	Nitronic 60
168	Ball Bearing-Coupling End	Steel			
251	Constant Level Sight Oiler	Steel & Glass			
320	Set Screw-Impeller Wear Ring	303SS			
332A/333A	Oil Seal	Synthetic Rubber			
351	Casing Gasket	Non-Asbestos			
412A	O-ring-Impeller	PTFE			
412F	O-ring-Shaft	BUNA RUBBER			

<sup>1</sup>Used when impeller is furnished without wear rings

<sup>2</sup>Flame hardened to 550 BHN

## Materials of Construction

CODE	SPECIFICATION
1000	Cast Iron – ASTM A48 Class 25B

	I	Cast Iron ASTM A48 Class 30

NOTES: Maximum suction pressure: 240 PSIG  
 Ratings shown reflect pump limitations only. User should insure that connecting piping including mating flanges are adequate for anticipated service.  
 Suction and discharge flanges drilled to match 300 lb. steel, bronze and 250 lb. AISI cast iron.

# Dimensions

All dimensions in inches and (mm). Not to be used for construction.
